ABSTRACT**15**

The present invention relates to a method comprising at least the following steps:

- at least a first heated composite strip is introduced into at least one die,
- 20** - at the same time, at least one molten material is introduced into said die in contact with said first composite strip, so as to obtain at least one second composite strip,
- said second composite strip is wound around a support rotating about its axis.

25 The invention also relates to a device for implementing the method and to the products obtained.
